DocView Guide

DocView opens documents in any office format right on your phone — no internet, no ads, no sign-up.

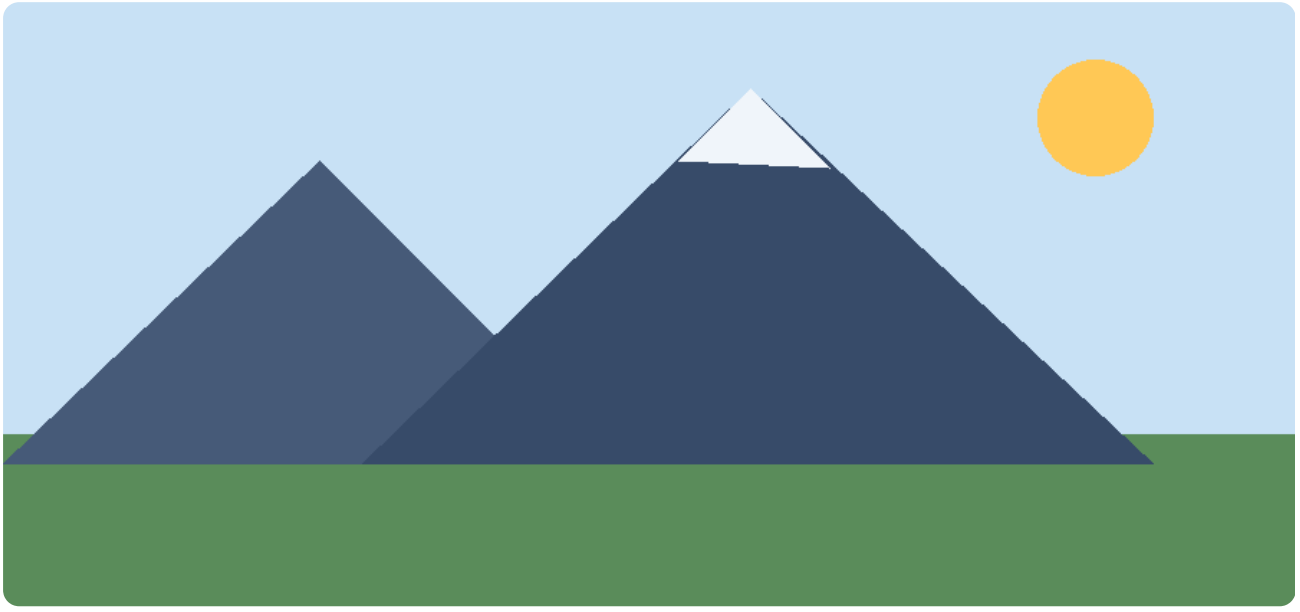
1. Opening a file

Tap “Open a file” on the home screen, or pick DocView in “Open with” from Telegram, email or Files.

2. Search and contents

The magnifier searches text in PDFs, documents, spreadsheets and presentations. Matches are highlighted and the arrows jump between them.

Format	What works
PDF	search, outline, passwords, night mode
Word	text, tables, images, lists
Excel	sheets, number formats, search
PowerPoint	slides, full-screen show



3. Printing and PDF

Any document can be printed or saved as PDF from the “More” menu.

4. Night mode

PDFs have a night mode with inverted colours, and books have Paper, Sepia and Night themes.

Pinch or double-tap to zoom. Long PDFs are easy to skim with the scrubber on the right.
